

Whitepaper

• EQUITY •

Earn more than interest!

Our mission at Equity is to provide crypto users an option that works like a traditional savings account at a bank. Holders of Equity will receive reflections from the transaction tax in a user selectable coin such as USDT or ETH. *Reflections earned are not interest.

Buy and sell transaction taxes will be set at 20% with 0% wallet to wallet tax.

100% of the tax will be paid out to holders as reflections, additional gas charged on transactions is used to send the reflections. No LP tax is required to keep the LP funded, the reflections will add Equity to the LP with every pay out.

Our goal is for people to use Equity as a method of both savings and P2P payment, holding the coin long enough that the taxes are offset by the reflections.

We are not building a swap, there will be no NFT's, no wallet, no debit card. We are not wasting money on fads and trends.

Our goal is clear and simple. We have built a solid contract on a solid network with a solid dashboard to use for reflection tracking and selecting your pay out coin. There are no additional development costs to be paid, marketing funds will be used for marketing. Our team and marketing will be paid through reflections alone, the Equity in these wallets is locked by the contract.

Initial coin allocations

We have a circulating supply of **1,000,000 coins**.

- 5% will be allocated to the team and 5% to marketing. These wallets will not sell Equity and will be funded by reflections alone. They will be locked by the contract for 1 year minimum. Due to the way locking services work, these wallets CANNOT be locked or vested as the reflections would then go to the lock service and not be available for use by us.
- 10.41% of the supply was allocated to a private sale to fund marketing for the presale on DxSale and some development costs.
- 79.59% of the supply of the supply has been allocated to the presale on Dxsale.
- Private sale fund allocation: 1 BNB presale fee, 4 BNB launch costs and LP lock, Remainder to marketing.
- Presale fund allocation: 51% LP 49% marketing. Presale fees.
- Starting LP: Will be created at a rate of 1 BNB per 1000 Equity to ensure launch price is equal to presale price. We cannot predict the initial price at this time due to BNB price volatility.

Team

Our development team consists of 4 members, we are all long time crypto enthusiasts and very active in the community. We have all been very active in the BSC space over the last year and are certified diamond hands. We have built several of the best crypto communities on Discord including several high profile projects. We will not name drop but if you are part of these communities you will know us.

- **Project Manager**

James Woodfin AKA Dookiejones on Discord, Twitter, Telegram and Steam.

- **Business Development Manager**

LaDy Ninja on Discord and Telegram, Crypto LaDy Ninja on Twitter.

- **Community Manager**

Diesela3 on Discord and Telegram.

- **Lead Engineer**

Deathwing on Discord and Deathwing1337 on Telegram.

Road Map

- ✔ Stage one: Complete and test contract, website, dashboard.
- ✔ Stage two: Complete private sale, security audit of contract, marketing for presale.
- ✔ Stage three: Complete presale and launch token.
- Stage four: Continuous marketing. Implement community feedback as necessary.

Security

Security is our number one goal. We have been a part of the BSC space for nearly as long as it has existed. We have all been rug pulled more times than we care to admit. As such, our focus is on the security of your funds.

Our LP and marketing wallets are all using Gnosis Safe Multisig verification so no one team member can access these funds. The LP wallet will be locked in 4 month intervals because we expect Pancake V3 soon and will migrate once available. We will be maintaining our LP locks quarterly for the life of the project.

Our team and marketing wallets will be locked by the contract for 1 year at minimum, those wallets will not be able to buy, sell or transfer Equity until the lock has expired.
